Shafin Khan

Applied AI Engineer

shafinkhan2829@gmail.com | Mumbai, India | Open to remote and on-site roles worldwide

linkedin.com/in/shafinkhan29 | github.com/shafin-29

Summary

Applied AI engineer with two years of experience building production-grade tools and AI-powered applications from the ground up. Skilled in React, Next.js, TypeScript, Python and agentic AI, with a focus on AI agents, developer tooling and scalable full-stack products.

Education

BS in Data Science and Applications, *Indian Institute of Technology Madras (IIT Madras)*
In progress

Technical Skills

Languages
TypeScript, JavaScript, Python, HTML5, CSS/SCSS, Bash

Backend and Data
Node.js, FastAPI, REST APIs, PostgreSQL, MySQL, MongoDB, Prisma, PyTorch, Scikit-learn

Cloud and DevOps
AWS, Azure, Azure Functions, Docker, NGINX, GitHub Actions, CI/CD, Linux, Git

Frontend
React, Next.js, Redux, Tailwind CSS, Mantine UI, Storybook

AI
Agentic AI, RAG pipelines, LangChain, LLM integrations (Anthropic, OpenAI, Gemini)

Testing
Jest, Cypress, Selenium, WebdriverIO, Cucumber/Gherkin

Projects

Provenance AI 2026
Python, FastAPI, Next.js, TypeScript, Prisma, LangChain, Resend, Slack
- Designed and built a real-time safety layer for RAG pipelines that intercepts vector database retrievals before they reach the LLM, filtering stale and quarantined data in under 20ms across four configurable safety modes.
- Built an automated remediation engine with semantic diff analysis, blast radius computation, and incident alerting via Resend and Slack.
- Shipped a drop-in Python SDK for zero-refactor LangChain integration with end-to-end lineage tracing.

NeuralNode 2026
Next.js, React, TypeScript, Tailwind CSS, React Flow, Stripe, Sentry
- Built a full-stack, no-code workflow automation platform with a visual drag-and-drop React Flow canvas for designing event-driven workflows.
- Implemented multi-node triggers (Webhooks, Stripe events, Google Forms) and AI nodes for OpenAI, Claude and Gemini.
- Engineered the SaaS layer with Better Auth, Polar subscription billing, and Sentry error tracking and AI monitoring.

NightCode 2026
TypeScript, React, Node.js, Anthropic Claude, OpenAI, Clerk
- Architecting a terminal-based AI coding agent with an OpenTUI and React interface for planning, chatting and building software inside local projects.
- Implemented dual Plan and Build modes with AI SDK streaming, multi-model support (Anthropic, OpenAI), and local tools for file reading, editing and shell execution.

- Integrated Clerk OAuth for browser-based authentication and Polar for usage-based credit billing.

Vibe 2026

Next.js, TypeScript, tRPC, Prisma, PostgreSQL, Inngest, Docker, AWS, Clerk

- Designed and developed an AI-powered Next.js application generator that turns natural language prompts into production-ready, type-safe web apps, using Grok 4 for code generation.
- Used E2B sandboxed environments for instant live deployment previews.
- Built the backend with tRPC for end-to-end type safety, Inngest for background jobs, and Prisma with PostgreSQL; deployed on AWS with Docker.
